SUPPORT COMPLET CORRIGE

OBSIDIA / BRODY / DOMAIN BINDING AUDIT

Document de travail interne - branchements, statuts, instances, familles et P1 -> P80

Champ	Valeur
Source principale	audit brody ect serveur ful 222+ audit branchement int + audit chat terminal full non branché (2).docx
Role des PDF fournis	Exemples de style uniquement
Objet	Ce qui est branché / actif / formalisé / non branché, et à quelle instance Brody ou domaine
Chiffres scellés	4353 items - 3316 non branchés strict - 204 partiels - 772 Brody only - 61 Brody+Domaines - 80 P1->P80

Règle de lecture

Ce document reprend le document source fourni et l'organise en support lisible. Le but n'est pas de raconter le projet, mais de mettre noir sur blanc l'etat de branchement: branche Brody, branche Domaines, partiel runtime, non branche, statut source et instance touchee.

Les statuts sont stricts: Brody only ne veut pas dire domaine. Partial runtime ne veut pas dire Brody. Reference only not bound veut dire present dans la reference Claude mais non retrouve dans les surfaces scannees.

Les instances suivies sont: Brody Core, Brody V1, Brody Enriched, UI, Kernel, Graphiti, Bank, Trading et GPS. Le Kernel X108 reste la seule autorite de decision.

1. Rapport complet - verdict scellé et objectif du support

Verdict officiel scellé

Métrique	Valeur	Lecture
Items Claude audités	4353	Inventaire nominal total audité
Non branchés strict	3316	Référence uniquement, pas retrouvé dans les surfaces runtime scannées
Partiels runtime	204	Présent UI/Kernel/Graphiti/tests/preflight, pas Brody/domaines
Brody only	772	Branché côté Brody, pas domaine
Brody + Domaines	61	Branché côté Brody et au moins un domaine
P1 -> P80 audités	80	Ledger paliers/freezes/audits/runs

But de lecture

Identifier ce qui est réellement branché, à quelle couche, et ce qui reste référence uniquement. Le support garde les noms détaillés présents dans le document source pour les familles explicitement listées: pépites, modules, agents, arbres, lois, et P1->P80. Pour les familles de 500 items, le document source contient surtout les compteurs et les fichiers générés localement, pas toutes les lignes exploitables dans le fichier transmis.

2. Inventaire global et tables par famille

Famille	Total	Brody + Domaines	Brody only	Domaine only	Partiel runtime	Non branché

BOUNDARIES	23	73	49	355	Compteurs seulement dans source transmis

4. Instances et lecture des branchements

Instance	Rôle	Lecture audit
Brody Core	Machination / contrats / packet / raccord	Surface centrale de branchement Brody. Advisory only, pas decision souveraine.
Brody V1	Terminal / runtime historique	Référencé dans certains items, notamment agents/canon/Graphiti.
Brody Enriched	Surface enrichie de scan/publication	Surface principale trouvée pour les pépites et modules.
UI Workbench	Affichage et pilotage	Partiel runtime: afficher ne veut pas dire décider.
Kernel 3001 / X108	Autorité ALLOW/HOLD/BLOCK	Seule autorité souveraine.
Graphiti	Mémoire readonly	Contexte et index, non souverain.
Bank / Trading / GPS	Domaines terrain	Peu d’items branchés domaine: 61 seulement Brody+Domaines.

5. Toutes les pépites - nom / statut / verdict / instance

Verdict	Nombre
ITEM_BOUND_BRODY_ONLY	96

10. Protocoles, balances, canon, Cortex, domaines, mémoire Graphiti, preuves, routes API, boundaries

Le document source transmis donne les compteurs stricts V4 FAST et confirme les fichiers complets générés localement. Les noms exhaustifs des familles de 500 items ne sont pas présents dans le fichier transmis, donc ce PDF ne fabrique pas de noms absents. Les tableaux ci-dessous donnent le statut officiel scellé par famille.

14. Conclusion de travail

Etat réel

Le socle Brody est la zone la plus branchée. Les domaines existent comme surfaces, mais le branchement item-level domaine reste faible: 61 items Brody+Domaines sur 4353. Le stock non branché strict reste majoritaire: 3316 items.

Priorité

1) Nettoyer agents 69 vs 52. 2) Décider quelles pépites non branchées passent en Brody ou domaine. 3) Prioriser les familles DOMAINES / BOUNDARIES / ROUTES_API pour raccord domaine. 4) Ne pas confondre P1->P80 avec des modules runtime: ce sont paliers/freezes/audits/runs.
